

CloudWorkspace

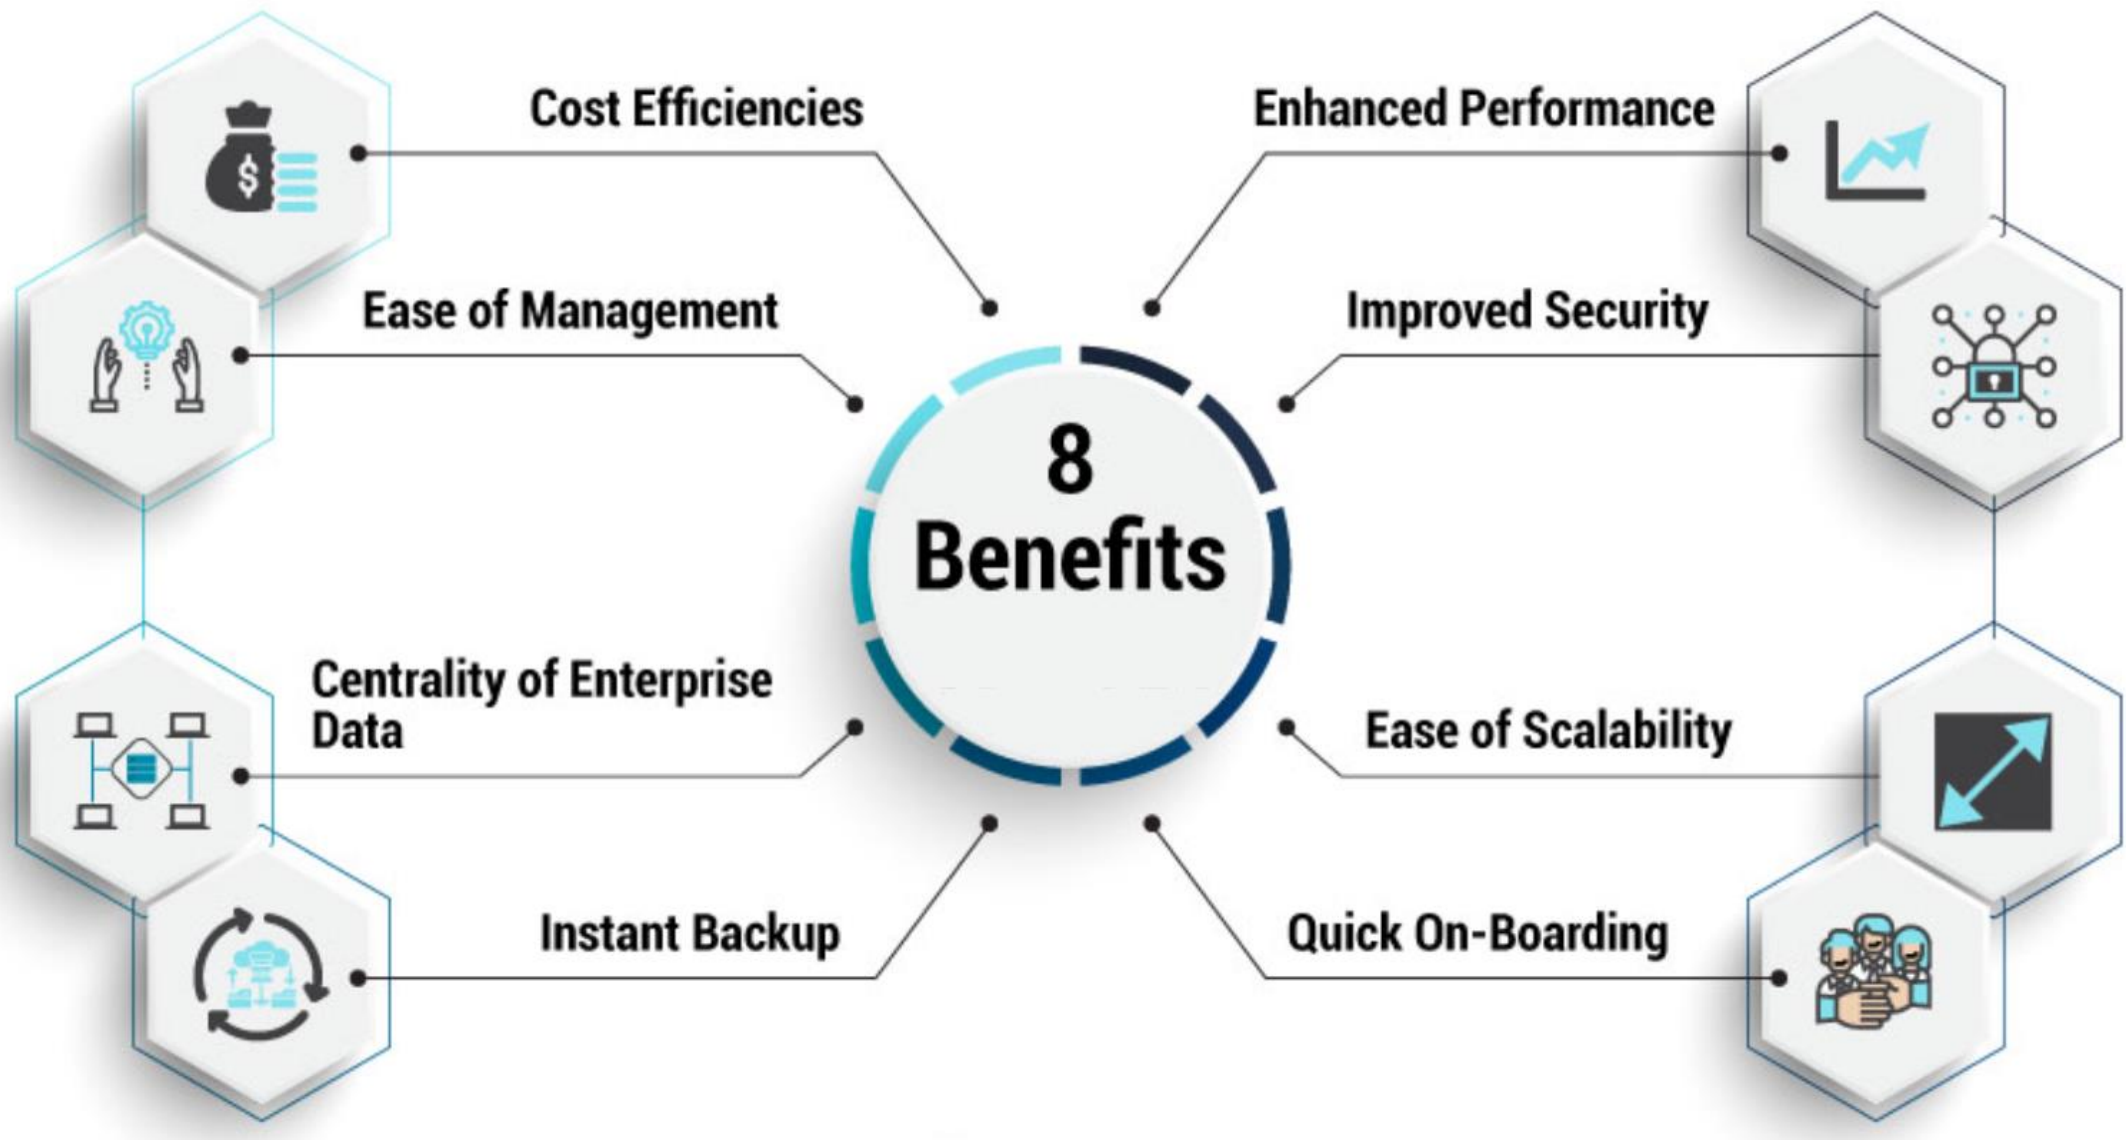

CloudWorkspace is a desktop delivery solution that enables businesses like yours to effectively and securely deliver cloud-based desktops and applications to your workforce, regardless of their *physical location or their device*. CloudWorkspace removes many of the security and logistical challenges of using a traditional workstation.

The Challenge

- A critical element to any IT strategy is how businesses deliver fully **functioning, secure, and accessible** desktops and applications to their employees.
- As the workforce has become increasingly disparate from the corporate headquarters (work from home) , this task has become even more challenging.

Benefit: Improved Productivity and Agility

Enable users to access their desktops from any internet enabled device, your workforce can achieve greater productivity. Weather and sick days are easier to manage as users can access their desktop regardless of where they are and remain accessible and productive.

Also, your IT staff as they are freed from the everyday maintenance of staff devices. All updates are installed to your virtual instance automatically, ensuring your desktops are functioning with the latest tools and security.

Benefit: Reduced Cost & Maintenance

CloudWorkspace moves all the processing needs from the existing desktop to the cloud, reducing the stress on your physical devices and extending the life of the hardware and enabling you to get more use out of your investment.

Not only do you see reduced costs in CapEx but OpEx can be reduced by 30-50%. You can even realize additional savings by implementing BYOD devices, enabling your workforce to use the system they are familiar with.

Benefit: Enhanced Security

CloudWorkspace hosted on Microsoft Azure incorporates multiple layers of security. Take advantage of Azure compliance certifications including ISO 27001, 27018, and 27701, plus PCI, FedRAMP High for Commercial, HIPAA, and more.

Data stored in the cloud and not local desktops

Use conditional access & Multi-factor authentication

Leverage TruAdvantage's Secure360 integration for end-to-end security

Benefit: Built-in Business Continuity and Disaster Recovery

CloudWorkspace provides instant disaster recovery and business continuity strategies because of the geo-redundant nature of the platform.

By removing the data center from your physical location, the disasters that may be plaguing your location will not have an effect on your team's ability to access their workspace. As long as they can access an internet connection, they can access their desktop.

Benefit: Scalable and Future Proof

Thanks to the subscription-based strategy of cloud solutions like CloudWorkspace, you can be assured that you will always have the most recent updates in features and functionality.

No expensive equipment to add or added cost to your monthly bill to pay for the new services. As the technology changes and grows and new features are added, you automatically receive those.
